

TransitFleet®

Fleet maintenance, parts inventory control, and purchasing software package for use on transit properties

- vehicle, component, equipment, and fixed facility inventory
- work order entry and tracking
- scheduling for scheduled maintenance work
- unscheduled maintenance problem entry, scheduling, and reporting
- warranty tracking on vehicles and components
- fuel and mileage entry, tracking, and reporting
- maintenance cost tracking and reporting
- maintenance labor tracking
- performance analysis
- parts inventory control
- purchase order entry and tracking
- purchasing control
- tire inventory and tracking

Designed and developed exclusively for transit

- road call tracking
- transit specific scheduling: OEM PM schedules, component PM's, state inspections
- easy lookup of last time and frequency of specific tasks; e.g., rear brake reline
- National Transit Database (NTD) maintenance reporting
- reporting for FTA triennial review
- cross referencing of parts inventory numbers for OEM's, aftermarket parts suppliers, and house numbers
- transit specific inventory capabilities: part number supersessions (full tracking history), core returns, unit rebuilds, and kit capability (as kit, kit assembly, kit breakdown)
- data entry from a fuel sheet typically used by transit properties, as well as automated fuel interfaces with fueling systems in use at transit properties
- meter changeouts, histories maintained by life-to-date mileages
- use of alternative fuels
- setup, entry, and tracking for campaigns, recalls, and seasonal work
- tire lease reporting
- tracking of maintenance work or services by outside vendors
- billing capability for warranty work, insurance work, or work charged to other departments or external customers

Easy to use

- data entry - understandable for supervisors, foremen, mechanics, parts and purchasing personnel
- information lookup - ready access to summary and detail vehicle, parts, and tire information
- report generation - Crystal reports

Affordable - Cost effective procurement and on-going software maintenance
